

A1.Sys1 - Introduction to Systems Engineering

Donnerstag, 22. Februar 2024 18:59

1. Keyfacts

Duration	3 days
Language	English or German
Setting	on-site or remote

2. Target Group

Engineers who are working in an interdisciplinary environment

3. Training Goals

The ultimate goal of this training is to learn how to master the challenges of interdisciplinary development. It is designed as entrypoint and trailsign into the topic of "Systems Engineering" and pursues the following goals:

#1 - Problem Understanding

Participants are able to understand the different types of systems and their present and future challenges as basis for deriving individual solution strategies.

#2 - Introduction to Systems Engineering

Participants have an understanding about the the ideas and concepts of "Systems Engineering" as interdisciplinary engineering discipline. They know the state of the art and are able to identify relevant topics and strategies for interdisciplinary development

#3 - Fundamental Systems Engineering Concepts

Participants understand the fundamental engineering concepts required for a Systems Engineering approach. A particular focus is put on Requirements Engineering, Architecture Development, Component Design, Integration, Verification, Validation (IVV), and modern engineering approaches

#4 - Quality, Dependability, and differences between the disciplines

Participants understand the different challenges introduced by different disciplines. A particular focus is put on the understanding of "Quality" and "Dependability" in context of Cyber-Physical Systems together with the corresponding "Quality Assurance" strategies

#5 - The Role of Organizations and individuals in interdisciplinary development

Participants understand the mutual influence of organizations and architecture. Further, they will be able to reflect on their individual role in context of interdisciplinary development

3. Training Content

Introduction to Systems Engineering

- Characteristics of Cyber-Physical Systems and System-of-Systems
- Systems Engineering as interdisciplinary discipline
- Technical and organizational aspects of Systems Engineering

Requirements Engineering

- Understanding Requirements Engineering as engineering discipline
- Fundamental concepts and methods of Requirements Engineering
- Quality Characteristics and Dependability

Architecture Development

- Fundamental concepts of Architecture
- Architecture Description, Viewpoints and Model Kinds
- Architecture Development Methods (Twin-Peaks, Zig-Zag Pattern, FAS)
- Model Based Systems Engineering (MBSE)
- Making good Architectures

Design & Development

- Design for X
- Component Design in an interdisciplinary environment
- Modern Development Logics (e.g., Agile, Continuous-X, DevOps,...)

Integration, Verification, and Validation (IVV)

- Virtual and physical integration
- Constructive, Analytic, and Organizational Quality Assurance

Platform und Variant-Management

- Fundamental Concepts for Platform and Variant-Management
- Feature Trees und Variable Architekturen

The Role of Organizations, Leaders, and Experts

- The Importance of Organizations: Conway's Law
- The Role of Leaders
- The Role of Experts

4. Learning Methods and Didactics

Combination of theory inputs, discussions, examples and exercises to deepen the learning effect

5. Your Benefit

One of the main challenges in interdisciplinary engineering is the identification of the "unknown unknowns". This training, designed as introduction and road sign. It provides a structured overview on the fundamental concepts of Systems Engineering. As such, it helps identifying blind spots and shows methods how to overcome particular challenges in interdisciplinary engineering.

6. Your Trainer

FH-Prof. Dr. Christian Neureiter
neureiter@successfactory.cc

Christian is Professor at the School of Information Technology and Digitalisation at Salzburg University of Applied Sciences. As head of the "Center for Dependable Systems Engineering" he is an expert in this field and has profound knowledge on the matter.

Asides his academic role, Christian has 10+ years of experience as consultant and trainer at the Successfactory Consulting group with a particular focus on Leadership, Software, and Systems Engineering related topics.

For more information on scheduled trainings or the or the organisation of a closed group contact us:

office.sbg@successfactory.cc
